Azure DevOps

PERSONAL PROJECTS

Socket Programming - Simulating different Cloud services. (06/2020 - 12/2020)

- Used Reader - Writer concept in C++ to simulate different types of services including **IaaS**, **PaaS** and **SaaS**.
- Implemented User login secure validation for multiple users to use services at the same time.

LMS (01/2021 - 06/2021)

- This project focuses on creating a web-based system called **Learning Management System** (LMS) which helps in conducting all the class activities online.
- Typically, this LMS provides an instructor a way to create and deliver content such as **synchronous** and **asynchronous** online classes.

TYPOO (03/2021 - Present)

- A **full-stack** blogging web application made with node and express js and backend with MongoDB with all the **CRUD** operations.
- Users can register themselves and write their own **blog** from their dashboard and the **admin** will be able to feature that blog on the running website.

AWS DevOps (01/2021 - 02/2021)

- **React CI/CD with Jenkins and AWS**. In this project, I have leveraged the power of **GitHub Actions** and Amazon **ECS** to create an automated flow that automatically builds a **Docker** image from your app and deploys it to your AWS ECS cluster.
- It then creates a pipeline using **Jenkins** which automates the development to **Heroku**.

CERTIFICATES

Completed AWS learning Series (AWS educate)

Campus Ambassador internship at The Campus Connect.

AWS-Cloud Management at Roopra through Internshalla
